

NumBugz[®] Rules

Snakez

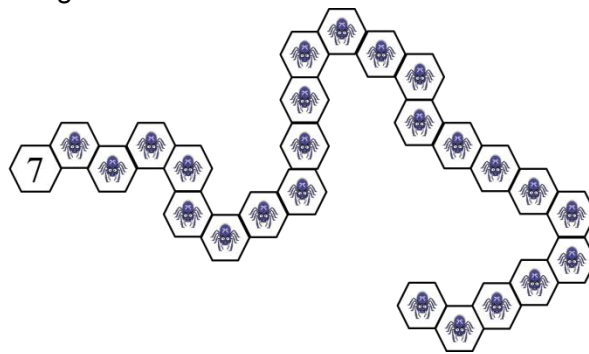

Snakez is a quick fun guessing game that's ideal for children starting out with numbers

Aim of the game: To create the longest snake

Players: Can be played by 1 to 6 people

Starting the game: Each player takes a complete set of Bugz and randomly places them, Bug face up, touching each other in a connected line. Each player flips over the first Bug in their line and the player with the highest number goes first.

Playing a Round: On your turn, guess whether the next Bug in your line is higher or lower than the previous one. Once you have shouted out your guess, flip it over and if your guess is correct, it adds to your snake and you carry on to guess the next Bug – and continue until you guess incorrectly. As soon as you guess incorrectly, your turn ends - count the number of correctly turned Bug in your snake and move them to one side. Play moves onto the next player.

On your next turn attempt to create a new snake (starting from the last Bug you turned) - that you hope to grow longer than your existing ones. Only your longest snake counts.

A PLYT Bug is either 13 or 1 but you have to state which number you are using.

Tip: To help very young players – take a spare set of Bugz, turn them number face up and put them in order from 1 to 12 as a reference number line.

Winning the game: When all the Bugz have been turned, the player with the longest snake wins the game.
